

Novopro SDX Booth with Lighting Rig & Bags

£329.95

The SDX booth has been designed and engineered by working performers to be the most practical and versatile entertainment booth in the market. Manufactured in a tough and durable, powder coated steel finish with solid welded construction points, the SDX booth is built to last. Due to the innovative design features, the booth is fully adjustable in height from 1.8m to 2.4m and in width, from 1.44m to nearly 2m

The package is supplied with everything required for the initial setup. The versatile SDX booth will then be easy to assemble at your next gig. It comes supplied with two zipped carry bags for easy transportation.

We found that alternative products in the market had a working height that was too low and uncomfortable in use, so we have made the shelf height 1m from the ground making the unit much more practical in use. The whole booth is adjustable in width and side panel angles by the unique sliding shelf support system, which maintains a stable platform for the SDX booth. Two rugged, carpet finished boards are supplied to fit upon the width adjustable cross bars, giving a working area of 122cm wide x 48cm deep. Optional accessories are available to increase the useable space even further. There are no less than 11 fixture mounting points on the top of the lighting bar and the mounting bolts come supplied with the unit. The top bar can be split into 2 x T bars or one continuous bar.

The white scrim panels allow for rear projection of a lighting effect to give you a professional presentation for your clients at your venue. The 4 x white elasticated material panels are attached by the stitched velcro strips and are made from machine washable* and flame retardant material. Spare scrim panels are available separately in a White or Black finish. * machine washable at 30 degrees
