

Novopro DJS1 BLACK DJ Screen with bag

The DJS1 BLACK is the perfect solution to screen your equipment and give a professional appearance to your set-up.

Novopro's unique, extending folding hinges enable the DJS1 screen to be set up or packed away within seconds. This saves you valuable time at your event - no messing around with the locating pins or clips used on other DJ screens....

This sturdy screen/facade is manufactured from box steel sections with solid welded construction points, giving you a robust yet lightweight frame.

Each of the four panels are 700mm wide x 1200mm high and the DJS1 weighs in at a manageable 13 kg.

The four white elasticallyated scrim panels allow for rear projection which can be backlit using any lighting source. The panels attach by velcro to the booth and are made from a machine washable and flame retardant material. Spare scrim panels are available individually in either white or black.

The DJS1 has a black powdercoated paint finish (a black powdercoat version is also available) and comes complete with a zipped carry bag for easy storage and transportation.

A full range of brackets and other accessories are available, so the DJS1 can be customised to your individual requirements.

The DJS1 is designed and engineered in the UK by working performers.
